

PRIVATE SECURITY SOLUTION

We provide a software solution to Private Security Companies.

Suited for supervisors, inspectors, guards, salespeople and other outdoor teams.

Our solution does not require any hardware other than a smartphone.

It is easy to use and has extensive reporting and customization features.

Cloud or Onpremise licencing models are available.

BASIC FEATURES

1

Online Reports

2

Trust the results

3

Make any place a
"Control Point"

4

Not only for
Security

5

Customer specific
Mobile application

6

Benefits

Online Reports

1

Reports are automatically delivered to all parties. No extra effort is required to generate and deliver any report.

Share reports with your customer.

You can design your own reports which may include daily activities, photographs, charts or missing tasks etc.

Trust the results

Time and Location

There is no way to tamper with time and location data.

Guide the personnel

Create rules for each point to collect photos and any other data. So with less training, you get better results.

Make any place a "Control Point"

A Physical Place marker is not required.

Which means less cost, less maintenance and faster start.

You don't need to define places on software either. As data is collected control points are automatically detected.

Not only for Security

■ Same solution can work for salespeople, maintenance teams and other field workers.

■ Use digital forms along with and photograph and video instead of paper for faster and easier service.

Customer specific Mobile application

We can provide project specific mobile application so your customer may download from iOS or Android markets.

Benefits

“with only 2% of
personel costs”

- No extra hardware
- No office personel for reports
- Minimum time to report maintenance and any other issue
- Track salespeople
- Flexible licencing: Use your own cloud or customer's cloud or a public cloud service like azure or amazon.
